Lateral thinking MRI Radiographers required

Full-time Superintendent and Senior Radiographer posts

Most attractive salary and benefits package

Following the establishment of the very successful London Upright MRI Centre, a second Upright scanner will open in Leeds in May 2012. We seek two experienced Radiographers with a difference.

If you are professional, enthusiastic, creative and have a sense of humour, read on:

The Leeds Upright MRI Centre is to open shortly and we are looking for experienced and motivated professionals wishing to further develop on their already proven clinical skills in a new state-of-the-art facility close to the centre of Leeds. In addition to all the usual benefits of MRI scanning, our unique Upright Scanner allows us to scan patients in weight bearing positions as well as those who are claustrophobic, anxious or who struggle, because of their weight, with conventional scanners. Our MRI scanner is the only one of its kind outside London. It is completely different from conventional “tunnel” MRI scanners, or other so called “open” scanners, where you are required to lie down. Using the latest technology, our MRI scanner brings enormous benefits to patients as has already been proven at our centre in London.

The centre will be accepting both NHS and private patients. The site will perform a range of scans, including neuro and MSK. You will be joining a small, dedicated team with the opportunity to develop an entirely new diagnostic service to the region.

Candidates must have a minimum two years’ experience in MRI. There is no on-call commitment. The centre will operate a shift system to cover extended days (including some weekends).

If you are patient friendly and would enjoy working within a great company then please contact us.
